HEALTH • PRODUCTIVITY • SUSTAINABILITY

A silent threat to public health

Quality of air on the agenda everywhere

The World Health Organization considers poor air quality to be a threat to public health. Asthma and allergies are on the rise across the globe. In the US, for example, about 30% of all adults have an allergy, and about 8% of adults and children have asthma. Poor indoor air leads to impaired cognitive ability, poorer concentration, tiredness, headaches, and respiratory tract irritation. This adversely impacts quality of life, but also the energy and productivity of your workplace.

Improved health & productivity

Nurture the talent in your organization

To attract, nurture and develop talent is likely a high priority in your business. Investing in an efficient solution to provide clean and healthy air will raise energy and production levels. Your employees will experience significantly reduced difficulties from allergies and asthma, for example. By reducing the spread of airborne diseases, many of our customers have reported a 20% reduction in sick days.

LightAir subscriptions

Clean air as a service

At LightAir we “live and breathe” to improve health and productivity at work, to create a sustainable work life if you like. We understand that your workdays are focused on the business and that clean air is not your core business. However, attracting and taking care of your talent is. Our numerous contacts with office and facility managers have helped us package clean air as a reflection of your needs and priorities. A LightAir subscription is “clean air as a service”. You can focus your energy on your core business while enjoying all the benefits of clean and virus-free air in the office.

- ✔ **No capital expenditure**
- ✔ **No lock-in period**
- ✔ **No maintenance**
- ✔ **No filter replacements**
- ✔ **100% predictable costs**

Scientifically proven

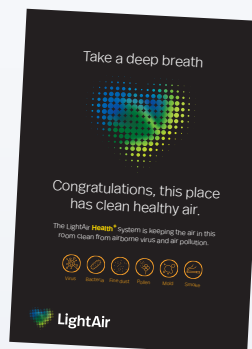

Destroys airborne viruses and filters out harmful particles

A research study from the Karolinska Institute in Stockholm demonstrates that LightAir IonFlow virus inhibitors destroys 97% of airborne viruses, while they are still in the air. The technology is based on Swedish innovation and research. When combined with the commercial-grade air purification of the CellFlow technology, these two components provide dual virus protection. The CellFlow technology also filters out pollen, traffic pollution and ultra-fine particles from your indoor air with 99.99% efficiency.

This innovative offering is the LightAir Health+ solution. Investing in such an efficient solution will provide the highest possible quality in indoor air, with industry-leading noise level and energy consumption. It will raise the energy and production levels of everyone involved, including the experience of significantly reduced allergy and asthma problems.

Certify your office

The question of indoor climate and air quality is always present in buildings, offices, and classrooms. When you equip your office with the dual action of air purification and virus inhibition of the LightAir Health+ solution, the change will be noticeable. Accompanying certificates will demonstrate to your employees and visitors that you’ve taken action to provide clean and healthy air for their wellbeing. The certificates can be placed in reception areas and meeting rooms to show that you genuinely care about the wellbeing of your talent.

Subscription offerings

Clean air as a service

LightAir Health+
